

HOOD FILTER Sizing Guide

Hood exhaust filters should always be installed with the baffles running in the vertical (top to bottom) position. This allows the grease to run down the baffles, to the grease trough, and then collected inside the grease tray.

NOTE: All filters should be tight fitting in the exhaust hood – no gaps should be present. If you are left with uncovered space between filters, be sure to order hood filter spacers. These are available in custom sizes to accommodate any situation.

Industry standard sizes are ordered with the vertical (top to bottom) dimension first and the horizontal (left to right) dimension second. See examples below.

- ▶ Before ordering hood filters, review the example above and be sure to round up to the nearest 1/2" – then select the corresponding size.

For example, if the actual filter size is 19 1/2" x 19 1/2", you would order a 20" x 20" hood filter. On the right is a quick reference guide for your convenience.
