

HD Hood Filter (Welded/No Rivets)

Aerodynamic, One-Piece Design Heavy Duty Stainless Steel & Galvanized Hood Filters

Description:

Heavy Duty Stainless Steel 7001 Series Kason Trapper Grease Filters are welded with no rivets. The baffle plates and frame are combined into a single unit so there are no rattling or loose baffles. The aerodynamic design of the baffles promotes better drain-off and improves airborne grease collection.

- > Solid baffle construction provides superior flame barrier.
- > Reduces risk of flare-ups with effective grease removal.
- > Heavy duty and durable but light weight means the filter is easy to install and clean and lasts longer.
- > Comes with two snap-in drop handles.
- > Locking handles optional.

AIR FLOW CHART

Air flow characteristics for Kason Trapper® series of grease filters 7001, 7002 and 7003.
