

ROOF GUARDIAN

Grease Containment System & Filters

Available in all sizes to accommodate any brand of roof mounted ventilator grease containment system.

The **Roof Guardian** features a state-of-the-art four layered grease filtration system to help keep your roof grease free. Stop using old technology that hides grease under layers of filters that sit on your roof.

The porous top layer filter helps grease disperse evenly to the lower filter levels

The second layer hydrophobic material, catches and absorbs grease while allowing water to run through.

The third plastic backed middle absorbent adds Extra rooftop protection.

The fourth and final layer of protection is of the same material as the top layer and keeps grease saturated filters off of the roof.
